PROJECT DEVELOPMENT PHASE
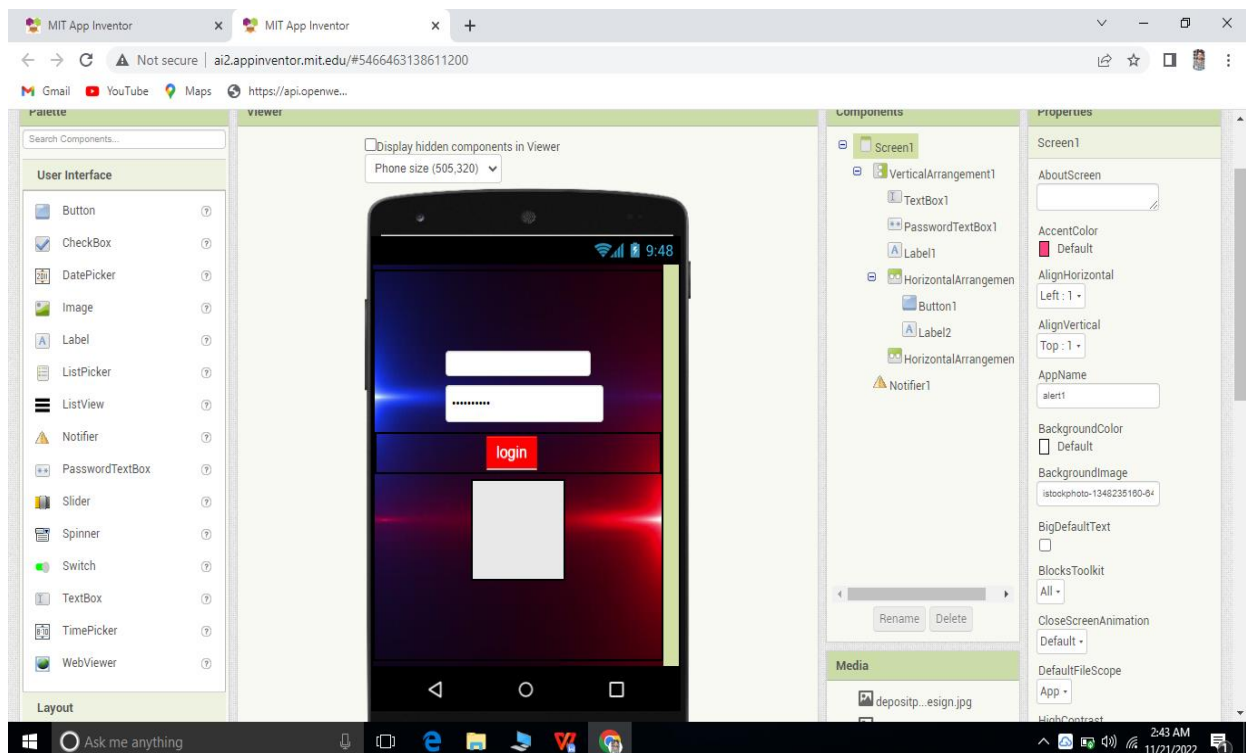

SPRINT – 1

### *CREATION OF APP FOR UI USING MIT APP INVENTOR.*

DETAILS:

- *To create an app for the user (authorities). This helps them to log in and receive notifications when motion is detected by the sign board.*
- *This was done using MIT app inventor*
- *The first page of the app includes a username and password login which is specific for the user.*
- *This app is further linked to the cloud which helps to identify the result obtained by the IOT*

This is the homepage of the application...

Backend blocks for the development....

Note: the secondary page(dashboard) is done in sprint 2.
